

# Anthony Kurieh

## Data & AI Engineer

Dubai, UAE · [anthony.kurieh@outlook.com](mailto:anthony.kurieh@outlook.com) · +971 50 497 3929 · [linkedin.com/in/anthony-kurieh](https://www.linkedin.com/in/anthony-kurieh)

Computer engineer with an M.S. in Applied AI, building **LLM applications and the data infrastructure underneath them**. Two years at WPP's Choreograph shipping analytics products, pipelines and internal tools for enterprise brands across MENA.

### EXPERIENCE

**Data Analyst, AI & Automation** · Choreograph (WPP Data, Analytics & AI), Dubai Aug 2024 – present

- **Shipped a conversational analytics product** used by two enterprise brand teams: plain-language questions are planned into SQL against a documented table catalogue, validated before execution, and answered with charts, replacing an analyst-in-the-loop for routine reporting questions.
- **Built a creative intelligence pipeline**: persists ad creatives from platform APIs to Cloud Storage before their CDN links expire, extracts metadata from images and video using computer vision and generative models, and joins creative features to performance to show which elements drive results.
- **Built an audience-targeted content rewriter** on GPT-4-turbo, taking platform, region, education level and age as inputs and scoring every rewrite against 25 computed readability metrics, logged per run.
- **Designed and shipped three internal web applications**: out-of-home site scoring per audience segment, competitive whitespace mapping, and a lead CRM, with row-level security across 19 tables, personal data encrypted at rest, and transactional email behind a queue with a dead-letter fallback.
- **Build and maintain 20 production dashboards** (Looker Studio, Power BI, Tableau, D3.js over BigQuery) tracking multi-million-dollar monthly media spend for 10+ enterprise brands, among them Amazon, Qatar Airways and Americana, across 7 MENA markets.
- **Developed 30+ automations** for ingestion, transformation, QA and KPI computation, cutting recurring reporting from multi-day manual effort to same-day turnaround.
- Member of the internal **AI Committee**; ran the build-versus-buy evaluations behind the team's AI tooling standards.

**Machine Learning Engineering Intern** · Salesdash, Washington, USA (remote) 2023

- Built and deployed an **LLM-powered Slack application** integrating OpenAI GPT APIs with MongoDB, letting non-technical users query the database in natural language, with error handling, input validation and a modular architecture.
- Developed a gradient-boosted model estimating remaining user budget at **85% accuracy** from engineered behavioural features, improving sales pipeline forecasting.

**Data Science Intern** · CMA CGM The HUB, Beirut Jul – Sep 2023

- Built a late-shipment prediction model reaching **90% accuracy** on container logistics data.
- Reimplemented **CTGAN in PyTorch** for synthetic tabular data: mode-specific normalisation and conditional training-by-sampling to preserve the multimodal columns and rare categories a naive GAN collapses.

**Computer Vision Engineering Intern** · Oculi, Beirut Summer 2023 · 12 weeks

- Extracted regions of interest from an event-driven vision sensor's **actionable signals** (projection histograms), iterating from naive thresholding to Gaussian-smoothed signals with box merging and padding.
- Built the team's dataset tooling: annotated **3,960 frames** in CVAT to YOLO format, wrote the class converting any video into per-frame signal records with labels, and documented the codebase with Doxygen.

### EDUCATION

**M.S. Applied Artificial Intelligence** · Lebanese American University 2025 – 2026

Thesis: LIRION, a voice appointment-scheduling agent with a schema-bound LLM orchestration loop, bilingual EN/AR operation and event-sourced analytics. Code: [github.com/anthonykurieh/voice\\_facilitator](https://github.com/anthonykurieh/voice_facilitator)

**B.E. Computer Engineering** · Lebanese American University, Byblos 2019 – 2023

Published: *Towards Image-Based Material Estimation* (IEEE M2VIP) and the Robot Quadruped Materials Dataset (IEEE DataPort), from a CNN predicting surface material and friction for quadruped foot placement.

### SKILLS & CERTIFICATES
